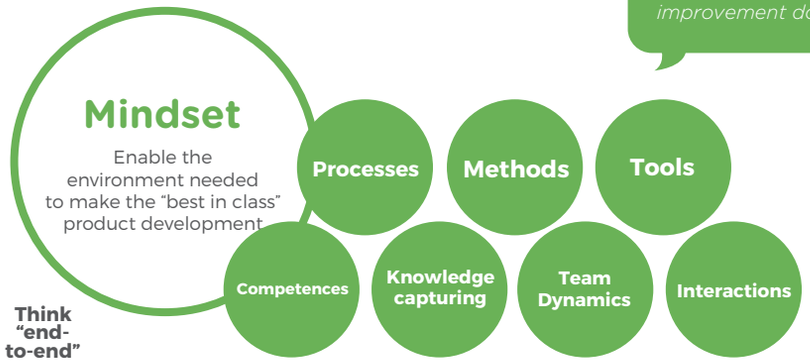
Excellent Product Quality relies greatly on the methods & mindset

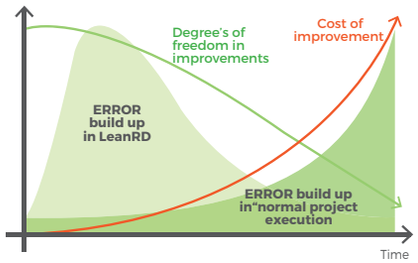
MechExcellence is used to work with Product Development Processes based on traditional PhaseGate models as well as elements from Lean Product Development

MechExcellence has experience in all phases and tasks in the product development, enabling a successful product development

If chaos exist - continous improvement don't



Benefits of MechExcellence



- Faster project speed, less back loops
- Improved products; quality and customer focus
- Improved communication; clearer processes, methods and interfaces
- Improved ROI; generally improved execution

A well-documented and implemented process solution is the foundation to secure a successful product development

Request our brochure on our templates; "Off the Shelf" or customized

Tolerance analysis, Process Capability, First Article Inspections, Risk Management etc.

The material from Mech Excellence has almost been a plug and play solution for Jabra to implement. The task has been solved in a very efficient way and in a high quality. We can highly recommend Mech Excellence to help your mechanical organization to perform better.

Michael Omby, Senior Director, Global Mechanical Engineering, Jabra, GN

Behind MechExcellence

With a Bachelor in Mechanical Engineering, Gert Plenge has gained more than 20 years' experience in mechanics product development

Through various positions within mechanical development at both Nokia Mobile Phones & Sonion, Gert has worked with both product development and strategical projects to improve work methods, templates and tools within mechanical product development and towards its stakeholders; cross functional, suppliers and customers.

Gert has a track record for project management of customer driven product development projects within Sonion, where he has successfully lead complex projects with high ambitions of time to market targets.

Gert is certified "Rapid Learning Cycle" (RLC) facilitator. RLC is a framework combining elements from PhaseGate, Agile and Lean methods to form a strong LeanRD development method, supporting your company in developing the right products, at the right time and cost, for the benefit of your company and customers.

Gert has published a set of articles on subjects around excellence in mechanical product development. These are available on LinkedIn and for download on.
